

VEHICLE INSPECTION POLICY

YayYo and its subsidiaries, Savy and RideYayYo hold safety as the number one priority, and such safety includes a thorough check of a vehicle's function and safety features before a Driver may use such vehicle while using the YayYo Platform. A Driver may only use the YayYo Platform with a vehicle that has been approved and registered with Savy or RideYayYo, as the case may be.

The California Public Utilities Commission ("**CPUC**") requires that a Driver's vehicle pass a vehicle inspection conducted at a licensed Bureau of Automotive Repair ("**BAR**") Facility. Drivers' vehicles must pass a multi-point inspection that meets or exceeds CPUC requirements.

A vehicle's failure to pass any of the inspection points will result in disqualification of the vehicle. The pass or failure of each item is subject to the inspection, observation and expressed opinion of a licensed BAR Facility. Driver must upload a picture of the completed Vehicle Inspection form or other evidence the vehicle has complied with the CPUC inspection requirements to their account by logging into their driver account on the YayYo website.

A Driver's vehicle must be a model no older than 10 years old and maintain mileage not exceeding 150,000. This policy may change from time to time in YayYo's sole discretion.

Drivers with clean vehicles tend to receive optimal tips and maintain good driver ratings. Savy therefore encourages Drivers to keep their vehicles clean at all times

In the event of an accident, a Driver must have her vehicle recertified through the multi-point Inspection. In addition, the CPUC requires that Driver must obtain a BAR Multi-Point Vehicle Inspection each 50,000 miles driver every 12 months on the vehicle, whichever is sooner. Evidence of this inspection must be uploaded to your YayYo account to remain active as a Driver on the platform.
